

Removing Content

To remove content from the site, such as a blog post or staff member, it's as simple as removing the necessary files. You can do this from the command line.

If you're removing a file, run the following:

```
$ rm /path/to/file/file-name
```

If you're removing a folder, run the following. The -R stands for recursive and removes all files in the folder, too.

```
$ rm -R /path/to/folder/folder-name
```
